Network Operations Center (NOC)/Admin

With hybrid work, the roles of IT and facilities have become even more complex.

For businesses to run smoothly, IT teams need eyes across everything, as well as access to real-time insights.

Control Hub is a game-changing centralized dashboard for managing all collaboration and devices—even remote ones. You can monitor data and trends, provision security and privacy controls, update and add new devices, and troubleshoot proactively. For example, if your CEO is in a virtual board meeting and there's a problem, Control Hub lets you go "behind the scenes" with info on audio and video quality, network information, and more. This means you can quickly and easily spot the issue and troubleshoot it instantly.

For office buildings, **Cisco DNA Spaces** unites the power of Webex and Meraki

with cutting edge AI to inform how your spaces are being utilized. This helps keep your people healthy and safe, while also addressing your sustainability goals.

Last, but not least: your network.

If collaboration slows down, it's a problem that needs to be fixed, fast. **Meraki Insight** uses AI to generate automated, specific root cause analysis and remediation steps. With just a click, you can go from issue, to insight, to resolution.

ThousandEyes takes it a step further. Embedded into Webex data centers, it gives you full path visibility across the network. That means there's nowhere for an issue to hide, whether on your network or the internet—you can spot and fix an issue before it impacts the user experience.

When it comes to managing your workspaces, Cisco has got you covered across collaboration, devices, smart buildings, and networking.
